

Vehicle History Report

VEHICLE DETAILS

Chassis number ¹: ZRR80-0118311

Manufacture date: 2015-03

Make: TOYOTA

Model: ESQUIRE

Body: DBA-ZRR80G

Grade: GI

Engine: 3ZR-FAE

Drive: 2WD

Transmission: AT

Title information ²:

Deregistered to Export

Accident / Repair:

No problem

Odometer rollback:

No problem

Manufacturer recall:

No problem

Safety grade ³:

★★★★★

Contamination risk:

No problem

This CAR VX Vehicle History Report is based only on Information supplied to CAR VX, LTD and available as of 2026-02-17 09:09:34. Other information about this vehicle, including problems, may not have been reported to CAR VX, LTD . Use this report as one important tool, along with a vehicle inspection and test drive, to make a better decision about your next used car.

ACCIDENT / REPAIR HISTORY

Problem type	Reported	Date reported	Data source	Details	Airbag
Collision	✔ Not reported				
Malfunction	✔ Not reported				
Theft	✔ Not reported				
Fire damage	✔ Not reported				
Water damage	✔ Not reported				
Hail damage	✔ Not reported				

ODOMETER READINGS HISTORY

Date reported	Data source	Odometer reading (Km)
2022-03-11	MLIT	86500
2024-03-19	MLIT	106900
2026-01-17	JU Nara	123712

USE HISTORY

Use in the contaminated regions ⁴	Radioactive contamination test fail ⁵	Commercial use
✔ Not reported	✔ Not reported	✔ Not reported

DETAILED HISTORY

Event date	Location	Odometer reading (Km)	Data source	Details
2015-03			TOYOTA	Manufactured
2015-03			MLIT	First registration
2022-03-11		86500	MLIT	Inspection
2024-03-19	Nara	106900	MLIT	Inspection
2026-01-09	Nara		MLIT	Last registration

MANUFACTURER RECALL HISTORY

VEHICLE ASSESSMENT ⁶

Overall Collision Safety Ratings

Driver's seat			Front passenger's seat		
Points	Evaluation	Goal average	Points	Evaluation	Goal average
11.18	★★★★★	93%	9.8	★★★★	82%

* In order to accurately differentiate between the evaluations of different vehicles, a standard is set based on current technology. Up to 6 points out of 12 is given level 1 and the rest of the range is divided up into equal parts, which are respectively assigned to level 2 (more than 6 points but 7.5 or less), level 3 (more than 7.5 points but 9 or less), level 4 (more than 9 points but 10.5 or less) or level 5 (more than 10.5 points).

Braking performance tests ⁷

Dry road		41.8 m
Wet road		44.6 m

VEHICLE SPECIFICATION

1st gear ratio	2nd gear ratio	
3rd gear ratio	4th gear ratio	
5th gear ratio	6th gear ratio	
Additional notes	Airbag position, capacity	
Body rear overhang	Body type	MV&1BOX

Chassis number embossing position		Classification code	127
Cylinders	4	Displacement	1980
Electric engine type		Electric engine maximum output	
Electric engine maximum torque		Electric engine power	
Engine maximum power	152ps(112kW)/6100rpm	Engine maximum torque	19.7kg· m(193N· m)/3800rpm
Engine model	3ZR-FAE	Frame type	
Front shaft weight	910	Front shock absorber type	
Front stabilizer type		Front tires size	195/65R15
Front tread	1480	Fuel consumption	
Fuel tank equipment	55	Grade	GI
Height	182	Length	469
Main brakes type		Make	TOYOTA
Maximum speed		Minimum ground clearance	
Minimum turning radius	5.5	Model	ESQUIRE
Model code	DBA-ZRR80G	Mufflers number	
Rear shaft weight	660	Rear shock absorber type	
Rear stabilizer type		Rear tires size	195/65R15
Rear tread	1475	Reverse ratio	
Riding capacity	7	Side brakes type	
Specification code	17697	Stopping distance	
Transmission type	AT	Weight	1570
Wheel alignment	2WD	Wheelbase	2850
Width	169		

Date: 2026-01-17, Auction: JU Nara, Lot #: 7038

Date:	2026-01-17	Lot #:	7038

¹ Chassis number – a unique identification number of the vehicle in Japan (same as VIN in the USA or Europe)

² Title information:

Registered – qualified for driving in Japan

Deregistered Temporarily – not qualified for driving in Japan, usually a temporary title during the ownership change

Deregistered Completely – not qualified for driving in Japan, the vehicle is determined to be scrapped

Deregistered to Export – not qualified for driving in Japan, the vehicle is determined to be exported

³ Determining the overall collision safety performance evaluation – For the driver's seat, the results of the full-wrap frontal collision test, offset frontal collision test, and side collision test are added together and evaluated to 6 different levels. For the Frontal passenger's seat, the results of the full-wrap frontal collision test and the side collision test (results for the driver's or the front passenger's seat are used) are added together and evaluated to 6 different levels.

Regular vehicle inspection – All vehicles in Japan must undergo regular vehicle inspections (shaken). New cars need to be tested after three years, and then vehicles must be tested every two years thereafter. A vehicle inspection (shaken) is compulsory for all vehicles with an engine size over 250cc. It ensures that all vehicles on the road are properly maintained and safe to drive. The test also checks that vehicles have not been illegally modified; if they are found to have been modified, they are not allowed on the road.

⁴ Use in the contaminated regions – The Fukushima Daiichi nuclear disaster was a catastrophic failure at the Fukushima I Nuclear Power Plant on 11 March 2011, resulting in a meltdown of three of the plant's six nuclear reactors. As a result, some areas in the following prefectures were contaminated: Fukushima, Miyagi, Ibaraki, Tochigi.

⁵ Radioactive contamination test – radioactive contamination inspection that was started in July 2011 as a preventive measure for exporting contaminated vehicles from Japan. The inspection is being conducted since in all sea ports of Japan under the supervision of The Japan Harbor Transportation Association (JHTA).

MLIT – Ministry of Land, Infrastructure, Transport and Tourism.

⁶ Japan New Car Assessment Program – the Ministry of Land, Infrastructure, Transport and Tourism (MLIT) and the National Agency for Automotive Safety & Victims' Aid (NASVA) have taken measures for safety, one of which is to assess commercially available vehicles through a variety of safety performance tests and release the resulting information compiled into the "New Car Assessment Program". The objective of Japan New Car Assessment Program is to increase the use of safe automobiles by providing an environment in which users can easily select such vehicles. This also promotes the development of safer vehicles by automobile manufacturers. Neck injury protection for rear-end collision performance test, rear seat passenger's protection for frontal collision performance test, rear passenger's seat belt usability evaluation test and seat belt reminder for passengers evaluation test are started in FY2009.

⁷ Braking Performance Tests – Braking performance is determined by the shortness of the distance in which a vehicle can stop and the stability of the vehicle at the time of braking. This test is performed under wet and dry road conditions for a vehicle which has both a driver and a front passenger. The distance it takes for the vehicle to stop and the stability of the vehicle at the time of braking is evaluated for when the vehicle is stopped abruptly while traveling at a speed of 100km/h. The stopping distance and vehicle speed have been measured by using GPS since FY2009.
