

Vehicle History Report

VEHICLE DETAILS

Chassis number ¹: TE52-034033

Manufacture date: 2012-03

Make: NISSAN

Model: ELGRAND

Body: DBA-TE52

Grade: RIDER BLACK LINE

Engine: QR25DE

Drive: 2WD

Transmission: AT

Title information ²:

NO.

Deregistered to

Export

Accident / Repair:

ĭ

No problem

Q

Odometer rollback:

No problem

O

Manufacturer recall:

No problem

 \checkmark

Safety grade ³:

 \bigcirc

Contamination risk:

No problem

About Buyback Guarantee

This CAR VX Vehicle History Report is based only on Information supplied to CAR VX, LTD and available as of 2023-08-02 01:14:14. Other information about this vehicle, including problems, may not have been reported to CAR VX, LTD. Use this report as one important tool, along with a vehicle inspection and test drive, to make a better decision about your next used car.

VEHICLE ASSESSMENT 6

Overall Collision Safety Ratings

Driver's seat			Front passenger's seat		
Points	Evaluation	Goal average	Points	Evaluation	Goal average
35.37	****	98%	23.33	****	97%

^{*} In order to accurately differentiate between the evaluations of different vehicles, a standard is set based on current technology. Up to 6 points out of 12 is given level 1 and the rest of the range is divided up into equal parts, which are respectively assigned to level 2 (more than 6 points but 7.5 or less), level 3 (more than 7.5 points but 9 or less), level 4 (more than 9 points but 10.5 or less) or level 5 (more than 10.5 points).

Braking performance tests ⁷

Wet road 43.4 m

VEHICLE SPECIFICATION

1st gear ratio	2.349 ~ 0.394	2nd gear ratio	
3rd gear ratio		4th gear ratio	
5th gear ratio		6th gear ratio	
Additional notes		Airbag position, capacity	
Body rear overhang		Body type	MV&1BOX
Chassis number embossing position		Classification code	
Cylinders	4	Displacement	2480
Electric engine type		Electric engine maximum output	
Electric engine maximum torque		Electric engine power	
Engine maximum power	170ps(125kW)/5600rpm	Engine maximum torque	25.0kg·m(245N·m)/3900rpm
Engine model	QR25DE	Frame type	
Front shaft weight	1040	Front shock absorber type	
Front stabilizer type		Front tires size	225/55R18 98V

GLOSSARY

¹ Chassis number – a unique identification number of the vehicle in Japan (same as VIN in the USA or Europe)

² Title information:

Registered – qualified for driving in Japan

Deregistered Temporarily – not qualified for driving in Japan, usually a temporary title during the ownership change

Deregistered Completely – not qualified for driving in Japan, the vehicle is determined to be scrapped Deregistered to Export – not qualified for driving in Japan, the vehicle is determined to be exported

³ Determining the overall collision safety performance evaluation – For the driver's seat, the results of the full-wrap frontal collision test, offset frontal collision test, and side collision test are added together and evaluated to 6 different levels. For the Frontal passenger's seat, the results of the full-wrap frontal collision test and the side collision test (results for the driver's or the front passenger's seat are used) are added together and evaluated to 6 different levels.

Regular vehicle inspection – All vehicles in Japan must undergo regular vehicle inspections (shaken). New cars need to be tested after three years, and then vehicles must be tested every two years thereafter. A vehicle inspection (shaken) is compulsory for all vehicles with an engine size over 250cc. It ensures that all vehicles on the road are properly maintained and safe to drive. The test also checks that vehicles have not been illegally modified; if they are found to have been modified, they are not allowed on the road.

- ⁴ Use in the contaminated regions The Fukushima Daiichi nuclear disaster was a catastrophic failure at the Fukushima I Nuclear Power Plant on 11 March 2011, resulting in a meltdown of three of the plant's six nuclear reactors. As a result, some areas in the following prefectures were contaminated: Fukushima, Miyagi, Ibaraki, Tochigi.
- ⁵ Radioactive contamination test radioactive contamination inspection that was started in July 2011 as a preventive measure for exporting contaminated vehicles from Japan. The inspection is being conducted since in all sea ports of Japan under the supervision of The Japan Harbor Transportation Association (JHTA).

MLIT - Ministry of Land, Infrastructure, Transport and Tourism.

- ⁶ Japan New Car Assessment Program the Ministry of Land, Infrastructure, Transport and Tourism (MLIT) and the National Agency for Automotive Safety & Victims' Aid (NASVA) have taken measures for safety, one of which is to assess commercially available vehicles through a variety of safety performance tests and release the resulting information compiled into the "New Car Assessment Program". The objective of Japan New Car Assessment Program is to increase the use of safe automobiles by providing an environment in which users can easily select such vehicles. This also promotes the development of safer vehicles by automobile manufacturers. Neck injury protection for rear-end collision performance test, rear seat passenger's protection for frontal collision performance test, rear passenger's seat belt usability evaluation test and seat belt reminder for passengers evaluation test are started in FY2009.
- ⁷ Braking Performance Tests Braking performance is determined by the shortness of the distance in which a vehicle can stop and the stability of the vehicle at the time of braking. This test is performed under wet and dry road conditions for a vehicle which has both a driver and a front passenger. The distance it takes for the vehicle to stop and the stability of the vehicle at the time of braking is evaluated for when the vehicle is stopped abruptly while traveling at a speed of 100km/h. The stopping distance and vehicle speed have been measured by using GPS since FY2009.
